Workshops / Webinars organized:

- A Three-day workshop on **"Practical Intro to Image Processing on Google Colab - Python Platform"** was conducted from 10.06.2020 to 12.06.2020. In this workshop, Basic concepts, Morphological operations, Thresholding, Binarization, Edge detection and Segmentation algorithms of Image Processing and programming on Google Colab in python Platform were discussed. At the end of the workshop, online quiz was conducted to assess the performance to the students.

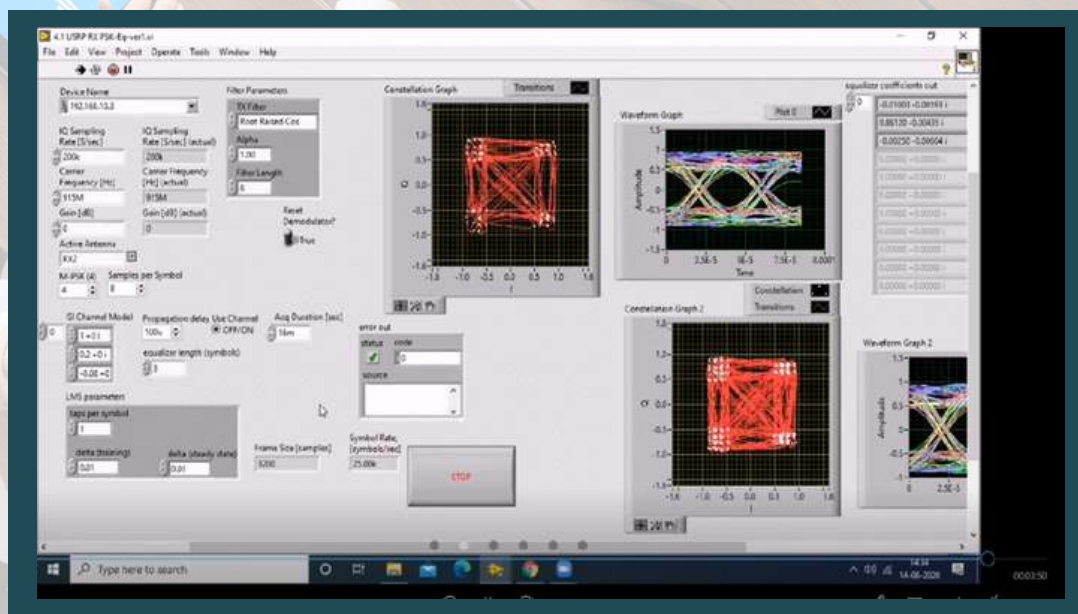

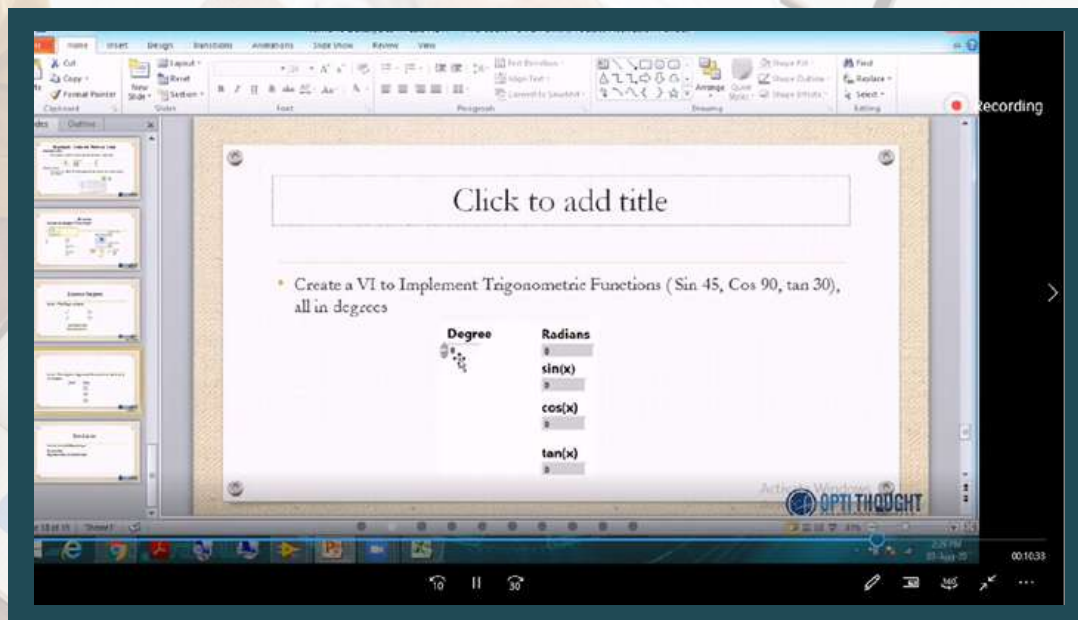

- A Webinar on "**Space Modelling of Image Content**" was conducted on 01.07.2020. The speaker of this webinar is Dr.R.Hemalatha, Associate Professor, Department of ECE at SSN College of Engineering, Chennai. This method uses a vector-space model to represent images in a multidimensional space. This model allows the use of multiple attributes in the retrieval process and also identifies the most selective values for each attribute. Therefore by ignoring the less significant values the user can reduce the dimensionality of the feature set and simplify the vector model. It also allows the user to choose any similarity measure depending on the application. The user can also assign weights to the different attributes depending on the retrieval mechanism intended. These characteristics of the retrieval method increase the retrieval efficiency and makes the model very flexible as it can be used universally for retrieving images from different domains.
